Grouts & Anchors

ArmGrout M-40

(Formerly known as MYK Grout M-40)

Free flow Non-shrink expansive grout

TECHNICAL DATA SHEET

Product Description

ArmGrout M-40 is a free flow non-shrink high strength expansive, controlled expansion grout for machinery foundations. It is based on port land cement with graded aggregated and additives which impart controlled expansion in the plastic state. It effectively transfers all operational loads to the foundation. The non-shrink grout plays a vital role in the structural stability of the construction projects. There function is three folds to fill the voids between the base plate and concrete foundations completely and permanently, without shrinkage or separating from either to transfer all loads from the base plate to the concrete foundation or to maintain precise alignment

Uses

- Precision grouting
- Grouting of base plates of turbines, compressors, boiler feed pumps
- Anchoring for a wide range of fixings.
- Masts, anchor bolts and fence posts.

Features and Benefits

- Non-shrink: basically, a non-shrink material occupies the filled space without shrinkage
- High Strength: High early strength is possible at very early age
- Free flow: it has excellent flow characteristics and has positive expansion during setting
- Chloride free: it is basically a chloride free material and does not affect the steel or foundation bolts.

Application Methodology

Step no.1: Surface Preparation:

The substrate must sound clean and free from Contaminations, all loose particles must be removed. The steel and concrete surfaces must be etched mechanically to enhance the bonding properties

Step no.2: Product Mixing:

For best results a mechanically powered grout mixer should be used. When quantities up to 50kg are used, a heavy duty slow speed drill (400-500 rpm) fitted with a paddle is suitable. Larger quantities will require a heavy duty mixer. To enable the grouting operation to be carried out continuously, it is essential that sufficient mixing capacity and labor are available. The use of a grout holding tank with provision to gently agitate the grout may be required.

The water content should be accurately measured into the mixer. The total content of the ArmGrout M-40 bag should be slowly added and continuous mixing should take place for 5 minutes. This will ensure that the grout has a smooth even consistency & No lumps in the mix.

Step no.3: Product Application:

Pre soak the concrete surface with lots of clean water before the application is carried. All the surplus water is removed before the grouting application is carried out.

Water Powder Ratio:

Consistency W/P Flow able 0.17 to 0.19 (Up to the flow able consistency and total bleed free mix but maximum. Up to 0.19)

Water required for 25 Kgs bag: 4.75 Lts @ W/P Ratio 0.19

Flow Characteristics:

The flow is basically depending on the gap width and the head of the grout and governed by the gap width.

Grouts & Anchors

(Formerly known as MYK Grout M-40)

Free flow Non-shrink expansive grout

Technical Data

Fresh wet density at flow able consistency	Approx. 2.20
Controlled Expansion in the plastic state	1-4%

Compressive strength: (BS 1881- part 116: 1983):

	Compressive Strength in N/mm2
Age/ Days	IN/11111Z
Flowable W/P 0.19	
1 Day	>10N/mm ²
3 Days	>20N/mm ²
7 Days	>30N/mm ²
28 Days	>40N/mm ²

Note: Cubes Size of the used cubes 70.6mm x 70.6mm x 70.6mm tested at 30° C.

Flexural Strength at 30°C: BS 4551/1998

Age/ Days	Strength in N/mm2
7 days	Approx. 4
28 days	Approx. 6
Tensile Strength @28 days (ASTM C 307)	3.0 N/mm2 @30 ⁰ C

Placing:

At 30^oC the grout within 15 minutes of mixing to gain the full benefits of the expansion process. Continuous grout flow is essential for large applications. Sufficient grout must be prepared before starting. The time taken to pour a batch must be regulated to the time to prepare the next one.

Working Time:

Store under covered, in unopened condition, clear of the ground in cool dry condition, protected from frost and excessive draught. When stored in the above conditions to be used with 6 months from the date of manufacture.

Curing:

The entire exposed surface must be adequately cured with clean water.

Shuttering:

The form work should be constructed to be leak proof. This can be achieved by using suitable material or by using foam rubber strip or mastic sealant beneath the constructed form work and between joints

Working Conditions:

Do not place the grout when the ambient temperature is 5 deg Celsius. Use hot water to gain the strength when the temperature is low and cold water when the temperature is high

Yield: 13.25 Lts at flow able consistency for 25Kgs of HDPE bags

Grouts & Anchors

ArmGrout M-40
